

PALLETS

DESCRIPTION

Flowline Specialists' pallets provide an economical method of installing and storing jumpers, flexibles, umbilicals and cables.

Pallets are available in a range of sizes to suit project requirements. Posts can be relocated to suit the product's MBR. Post height can be adjusted to accommodate the product length. Pallets can be fitted with extensions and mounting frames to suit client product heads.

Pallets are loaded with the aid of Flowline Specialists' turntables. Once loaded the pallet can be put into storage or mobilised offshore where it can be deployed topside or subsea. The pallet can be deployed as a standalone unit or used in conjunction with Flowline Specialists' subsea deployment frame and turntable. Please see relevant data sheet for further information.

Modular in construction, all pallets are road transportable. The 2.8m pallets can be transported loaded with product allowing early transpooling operations prior to deployment.

SPECIFICATIONS

2.8M PALLET	
Dimensions (without posts)	L: 3.1m W: 2.9m H: 1.15m
Weight	800kg
Capacity	5,000kg
5.8M PALLET	
Dimensions	L: 5.76m W: 5.76m H: 1.26m
Weight	2,700kg
Capacity	35,000kg topside
8.0M PALLET	
Dimensions	L: 8.04m W: 8.04m H: 1.61m
Weight	4,375kg
Capacity	35,000kg topside
9.8M PALLET	
Dimensions	L: 9.8m W: 9.8m H: 1.4m
Weight	7,900kg
Capacity	25,000kg
