

TURNTABLE

DESCRIPTION

Flowline Specialists' turntables facilitate the controlled rotation of pallets, baskets, carousels and bobbins.

The turntables have a proven track record for transpooling and deployment operations – topside/vessel, subsea and quayside.

Their design allows them to be used in conjunction with Flowline Specialists' pallets and subsea deployment frames. Please see our pallets and subsea deployment assembly data sheets for further information.

All units are supplied with certified lifting, rigging, hold down brackets, control stand, pallet interface brackets and a suitably rated HPU.

SPECIFICATIONS

Max capacity (loading)	90,000 kg
Drive system	Various hydraulic drives are available
Control	Manual – hydraulic control stand
Dimensions	L: 3.16m W: 3.12m H: 1.06m
Weight	2,600kg
